

Evision E-Commerce V3

Increased online customer engagement through a higher performance in your shop

FASTER WEBSHOP

Speed in calculating customer specific offers is important to give the customer a good feeling.

BETTER EXPERIENCE

A good customer feeling will give a better experience. A better experience will lead to additional sales.

INTEGRATION WITH ERP

Integration with your ERP will give you extensive business benefits. You are able to introduce built to order principles in your manufacturing plants. This will lower your inventory levels and reduce cost.

Integration with your ERP will improve your bottom line.

E-commerce solutions are the driving force behind most business futures. To get the best results on the e-commerce solution a need for integration with ERP is necessary.

Integration can lead to lower performance of the entire system and could result in a less optimal online customer experience. With Evision E-Commerce V3 we have made some radical changes in our architecture and did a rebuild of the entire e-commerce platform to increase the speed of the platform by more than 10 times. We have listened to independent analysts like Forrester and increased the speed even more.

As e-commerce is no longer a domestic business proposition it is also necessary to be able to do advanced cross border taxation and complex freight calculations,

- **Speed of integrated data communication increased 10+ times**
- **Unlimited number of prices controlled by profiles**
- **Centralized monitoring of your web shop**
- **Multiline discount expanded with discount by weight**
- **Support for coupon discounts**

Evision delivers this out of the box.

Furthermore Evision introduces a new action-interpreter to allow the possibility to introduce document building for supplementing document-database. With this introduction Evision answers to the desire to work with vast amounts of documents in supporting online customer with for instance product manuals.

Several functions have been added to enable centralized platform monitoring, handle errors, and check on potential errors that can occur when improper settings are set during customization.

All to bring more speed and remain reliable as platform, enabling a better experience in your e-commerce platform.

More Features and Greater Benefits

Evision E-Commerce enables you to generate great benefits in your e-commerce strategy. For that we provide you a rich featured e-commerce platform with many out of the box functionalities.

Just to name a few:
